

BP Exploration (Alaska), Inc. – ABW Wellhead Shelters

Wellhead Shelters are manufactured into assembly kits at our facilities in Arlington, Washington. They are then shipped to Alaska's North Slope Oil Fields for assembly by ABW Technologies. Included in the design are steel-clad insulated walls and roofs, galvanized floor bases with grating, custom cold weather door hardware and specialty access openings and covers. The function of these modules is to provide extreme cold weather protection for the Wellhead Valve Tree and also provide a heated environment for workers during maintenance and inspection. These projects are fabricated in compliance with customer specifications, and UBC and NEC codes.
